

VOLTA FINANCE – MAY MONTHLY REPORT

NOT FOR RELEASE, DISTRIBUTION OR PUBLICATION, IN WHOLE OR IN PART, IN OR INTO THE UNITED STATES

Guernsey, 19 June 2013 – Volta Finance Limited (the “Company” or “Volta Finance” or “Volta”) has published its monthly report. The full report is attached to this release and is available on Volta Finance Limited’s financial website (www.voltafinance.com).

Gross Asset Value

| | At 31.05.13 | At 30.04.13 |
|-------------------------------------|-------------|-------------|
| Gross Asset Value (GAV / € million) | 241.5 | 212.7 |
| GAV per share (€) | 6.84 | 6.57 |

At the end of May 2013, the Gross Asset Value* (the “GAV”) of Volta Finance Limited (the “Company”, “Volta Finance” or “Volta”) was €241.5 m or €6.84 per share, an increase of €0.27 (+4.0%) since the end of April 2013 GAV.

Year to date 2013 performance is +12.2%.

The May mark-to-market variations* of Volta Finance’s asset classes have been: +0.4% for Synthetic Corporate Credit deals, +4.7% for CLO Equity tranches; +3.9% for CLO Debt tranches, +1.7% for Cash Corporate Credit deals and +13.2% for ABS. The increase of the GAV in May is mostly due to a revaluation of the UK non-conforming residual positions held by Volta.

Volta’s assets generated the equivalent of €1.7m cash flows in May 2013 (non-Euro amounts converted to Euro using end-of-month cross currency rates and excluding principal payments from debt assets) bringing the total cash generated during the last six months to €15.9m which can be compared with €15.4m for the previous six-month period ended in November 2012.

In May, the company purchased one tranche of USD CLO debt in the primary market (ACAS Clo 2013 – E)

At the end of May, Volta held €23.2m in cash, including €0.3m in relation with the Liquidity Enhancement Contract and €0.8m received in relation with its currency hedge positions. Volta could be considered as having roughly €20m available to invest.

MARKET ENVIRONMENT

In May 2013, credit spreads modestly widened in Europe and in the US. The 5 year iTraxx European Main index and 5 year iTraxx European Crossover Index (series 19) spreads went respectively, from 98 and 396 bps at the end of April 2013 to 103 and 422 bps at the end of May 2013. During the same period, credit spreads in the US, as illustrated by the 5y CDX main index (series 20), modestly widened from 75 to 79 bps. According to the CSFB Leverage Loan Index, the average price for USA liquid first lien loans was almost unchanged from 98.43% at the end of April 2013 to 98.45% at the end of May 2013. It was almost similar in Europe: the price of the S&P European Leveraged Loan Index went from 92.81% to 92.98% at the end of May 2013.**

VOLTA FINANCE PORTFOLIO

In May 2013, no particular event materially affected the situation of the Synthetic Corporate Credit

deals. However, the first loss positions in this bucket (ARIA III and the residual positions in JAZZ III) remain highly sensitive to any new credit event.

Regarding the Cash Corporate Credit Deals, no particular event or information materially affected the situation of the positions in this bucket during the month.

Regarding the Company's investments in Equity or Debt tranches of CLOs, in May 2013, no particular event materially affected the situation of the positions in this bucket. All the positions are currently paying their coupons.

Regarding the Company's ABS investments, no particular event materially affected the situation or the value of the positions in this bucket during the month. However, considering recent market trade observations of UK non-conforming positions we decided to revised slightly upward Volta's similar 5 position values while remaining cautious on cash flow projections.

The Company considers that opportunities could arise in several structured credit sectors in the current market environment. Amongst others, mezzanine or equity tranches of CLOs, RMBS tranches as well as tranches of Cash or Synthetic Corporate Credit portfolios could be considered for investment.

Considering the recent widening of corporate credit spreads some investments should be executed in the coming weeks.

** "Mark-to-market variation" is calculated as the Dietz-performance of the assets in each bucket, taking into account the Mark-to-Market of the assets at month-end, payments received from the assets over the period, and ignoring changes in cross currency rates. Nevertheless, some residual currency effects could impact the aggregate value of the portfolio when aggregating each bucket.*
